

Edraky Real Estate Solution

Overview

The solution is an interactive real estate dashboard designed to provide users with a comprehensive view of a property's master plan. It showcases various units, distinguishing between available, sold, reserved, or not-for-sale units. Users can engage with the application by applying filters to search for units based on specific phases, characteristics, or dimensions that meet their preferences. Additionally, the application allows users to express their interest in purchasing a unit.

Behind the scenes, the application is seamlessly integrated with backend systems, including SAP S/4 HANA and SAP Cloud Platform Integration (CPI), ensuring real-time updates and efficient data management. Integration with SAP C4C facilitates lead creation, enhancing customer engagement and sales processes.

Overall, the application serves as a user-friendly platform for potential buyers to explore and select real estate units that align with their requirements, streamlining the real estate buying process and improving customer engagement.

Functional Description

- Introducing NCI, an innovative web application revolutionizing the real estate market by bridging the gap between end-users and real estate companies. Real labs empowers both parties with a comprehensive dashboard showcasing all available projects, phases, and units, providing an unparalleled level of transparency and accessibility.
- End-users can effortlessly browse through a meticulously curated selection of real estate options, gaining detailed insights into each project, phase, and unit. High-resolution images and precise dimensions provide a clear visual representation of each property, while the unit status indicator ensures informed decision-making.
- For real estate companies, NCI serves as a powerful management tool, enabling them to effortlessly add new media, such as captivating videos and virtual tours, to enhance project presentations. Additionally, the application's intuitive masterplan drawing tools empower real

estate companies to create and update masterplans, keeping end-users informed about the latest developments.

- NCI goes beyond mere information sharing by facilitating direct interaction between end-users and real estate companies. End-users can seamlessly express their interest in specific properties, initiating a streamlined communication channel with the respective real estate company. This feature fosters timely responses and efficient deal closures.
- With its user-centric design and comprehensive functionalities, NCI is poised to transform the real estate landscape, providing an unparalleled experience for both end-users and real estate companies. Embrace the future of real estate with NCI.

The technology the product is built on:

SAP BTP:

- Backend: CAP Java
Front-end: UI5 - HTML5
Integration: SAP Cloud Platform Integration
